## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of claims 1-17 in the reply filed on January 22, 2008 is acknowledged. The traversal is on the ground(s) that examiner has (a) not shown that a search of all the pending claims would be a serious burden since the examiner has the disposal of powerful search engines, and (b) that the claims are not independent and distinct. This is not found persuasive because with respect to (a) above it is irrelevant whether the examiner has powerful search engines or not. Searching the two different inventions would be a serious burden since there would be two different inventions being searched and analyzed. With respect to (b) above, the examiner has shown that the inventions are distinct and the fact that cement borehole logging cannot be found anywhere in applicant's specification is irrelevant.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 12-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is noted that in claim 12, the paragraph that claims the "hub controller" recites signals demodulated by plural receivers. There is no antecedent language to plural receivers in the claim.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Guichard et al ('167).

Per claims 1 and 17, Guichard et al discloses an ultrasonic transmitter (see col. 2, lines 26-29). The transmitter includes a power supply (col. 3, lines 66-68), a frequency oscillator (4), a microcontroller assembly that includes an encoder (2), a serializer (3) and a micro-modulator (5) and an ultrasonic transducer (11).

Per claim 12, see Fig. 2b.

Dependent claims 2-11 and 13-16 are further provided by the structure disclosed in Guichard et al.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
